

Geotrace Data Integration Services

Geotrace offers a high quality, vendor independent, data management service including:

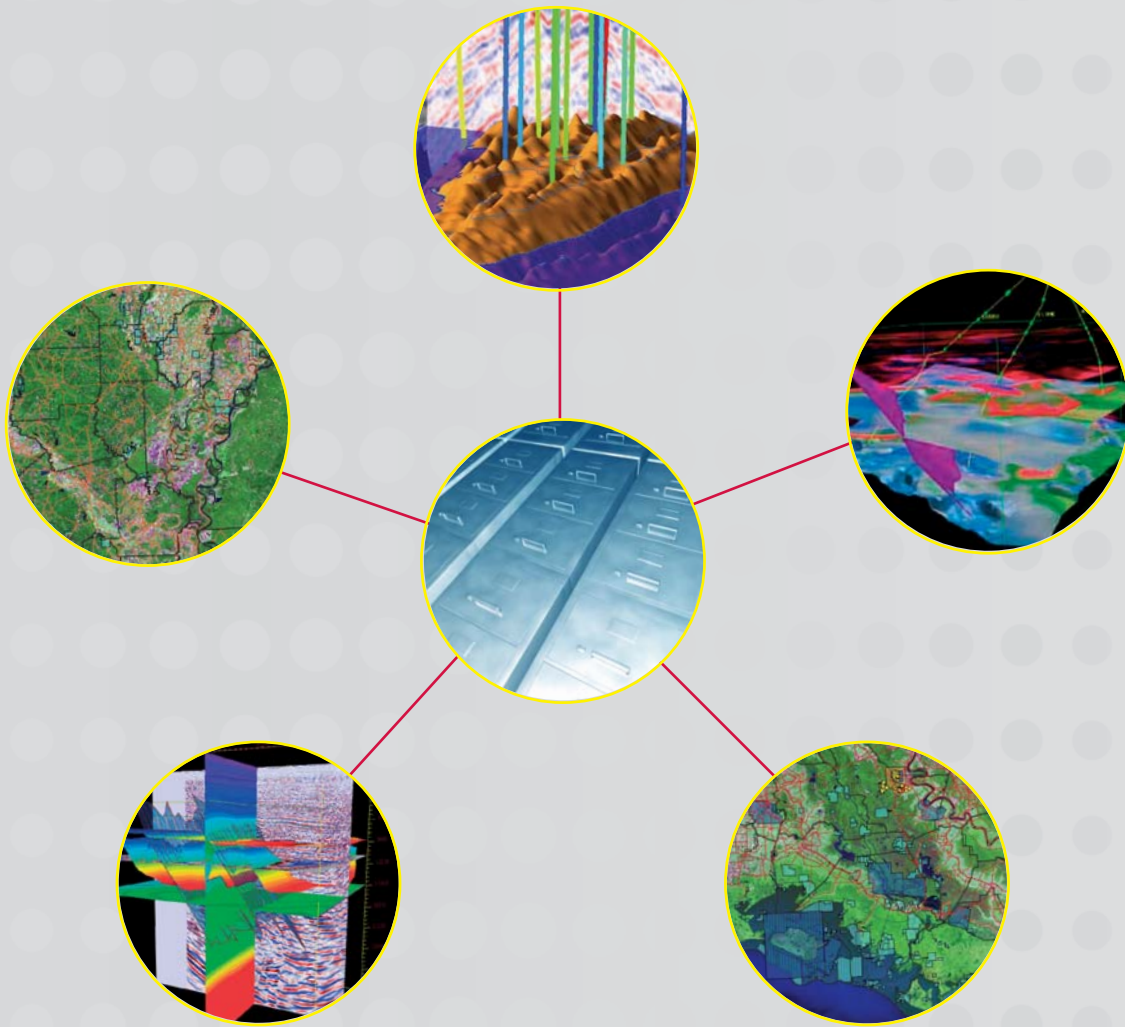

- **Data transcription and transformation** between formats e.g. workstation interpretation platforms, or petrophysical applications. Use the tool most appropriate to the task.
- **Managed Data loading** to a huge variety of industry standards, databases and workstations. Free your staff to find hydrocarbons!
- **Data delivery** to all major industry standards, databases and workstations.
- **Data Quality Improvement** using our industry leading blend of innovative technologies and quality people we can help you get the maximum information from your data.
- **Data Quality Assurance** for all types of Exploration and Production data. Make sure your raw materials are of the highest quality.
- **Catalogue creation.** Enable your people to find what they need quickly and effectively!
- **Asset Promotion.** We can take disparate information and assemble it into a single marketable package for presentation to, say, potential investors and buyers. We have a great deal of experience in the field of asset promotion and data room services.
- **Specialist Software.** Our integrated data management system features many specialist tools to facilitate highly effective data management. For example our GIS based data selector for multiple map views and our TIES data exchange suite to facilitate highly effective format conversions.
- **Software Portfolio Management.** We offer a full outsourcing and offshoring service to manage your data on your behalf, effectively and securely.

Geotrace's services are achieved using a blend of innovative technologies and some of the most highly skilled and experienced data management practitioners in the industry. The result is an effective, high quality, highly secure data management service.

Whether you require a one off data conversion, short term data room, or the outsourcing of an international data network, Geotrace offers a single point solution.

Transfer data from one Workstation Platform to Another:

- Geotrace has many years of experience converting data, and *saving the interpretations*, among the major workstation platforms.
- Our technique uses our own proprietary software to check the contents of the source and destination databases, provide quality assurance (and data quality improvement where required) and convert the data between formats.
- The entire process is carried out using experienced personnel and is subject to a full audit trail.
- In addition to supplying the resulting conversion in the destination format, we supply fully detailed reports showing the data contents of the source and destination databases. QC reports and a detailed commentary on the data conversion methods are also shown.
- The task can be carried out either in-house or on the client's premises. Either way you can be assured of a secure, highly professional and cost effective data management solution.
